PROFILE

Computer Science undergraduate with strong foundations in Data Structures & Algorithms, Object-Oriented Programming, Full-Stack Development, and Computer Vision. Solved 176+ LeetCode problems and gained hands-on experience training YOLO-OBB models during a Computer Vision internship. Passionate about building scalable software systems and solving real-world engineering problems.

EDUCATION

Loyola-ICAM College of Engineering and Technology (LICET)

B.E. Computer Science and Engineering — Expected Graduation: 2028

CGPA: 8.88

Modern Senior and Secondary School

HSC: 88% | SSLC: 90.8%

INTERNSHIP EXPERIENCE

Computer Vision Intern | Lesoko Technologies *2026 June– Present*

- Trained and optimized YOLO-OBB models, achieving **80% mAP@50** and **75% mAP@50-95** on custom image datasets.
- Enhanced detection accuracy through hyperparameter tuning and model evaluation workflows.
- Performed annotation validation and prediction analysis to improve dataset quality and model reliability.
- Analyzed performance using Precision, Recall, mAP, Confusion Matrix, and PR Curves.
- Utilized GPU-accelerated training environments to streamline experimentation and model development.

Technical Skills:

Languages: Python, Java, C, SQL
Frameworks: React, Flask, Spring Boot
Libraries: NumPy, Pandas, Matplotlib
CS Fundamentals: DSA, OOP, DBMS, Operating Systems
Machine Learning & Computer Vision: YOLO-OBB, OpenCV
Tools: Git, GitHub, Linux, Google Colab, Anaconda, VS Code

PROJECTS

India Web Usage Platform | React, Spring Boot, Tailwind CSS, Recharts

- Developed a full-stack web analytics platform to analyze website usage trends and risk categories.
- Built interactive dashboards and visualizations using React and Recharts.
- Designed REST APIs using Spring Boot for analytics processing and reporting.

Stock Analyzer | Python Flask, HTML, CSS, MySQL

- Developed a stock market analysis platform with portfolio simulation and dummy trading features.
- Built backend functionalities using Flask for stock data processing and investment analysis.
- Designed responsive interfaces to present market insights and investment strategies.

Image Comparison Tool | Python, Pillow (PIL)

- Developed an image comparison tool to identify identical and modified images through pixel-level analysis.
- Automated image verification using Pillow-based image processing techniques.

ACHIEVEMENTS

- Solved 176+ LeetCode problems, strengthening DSA and problem-solving skills.
- Maintained CGPA of 8.88 while pursuing Computer Science Engineering.

CERTIFICATIONS

- Python for Data Science
- Red Hat Certification
- SQL and PL/SQL
